

EQUIPMENT

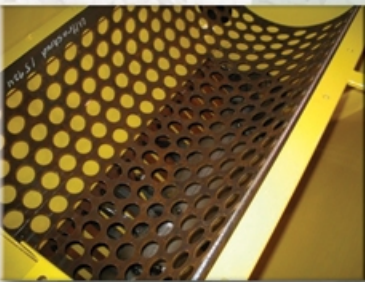

Shred-N-Go, Inc. operates UltraShred™ "Paper Predator" mobile paper shredding equipment because of the security, safety, automation, efficiencies and shredding process the equipment affords the operator and the customer.

Every truck has a fully automated lift system that gravity feeds the material into the shredder. The Security Operator never has to handle the material. In addition, every truck shreds at a rate of 5,000 pounds of paper per hour, which is the fastest throughput for mobile shredding equipment in the industry. This translates to faster and more efficient service for our customers.

Every truck has a certified scale incorporated into the lift system that allows accurate weight to be recorded.

Every truck has a "filtering screen" ensuring each document, no matter what the size, is shredded. The Hammermill filtering screen DOES NOT ALLOW ONE piece of paper to go through intact thus ensuring particle size of 5/8" or less. It's common knowledge in the paper shredding industry Hammermill shredding systems offer the most consistent particle size yielding best practices in information security for customers.

The Hammermill process is a pulverizing method of destruction. We encourage our customers to inspect our loads of shred paper at any time for assurance of complete destruction. **Shred-N-Go, Inc.** is the only on-site shredding service operating in the State of Minnesota that exclusively uses high speed 5,000 pounds per hour Hammermill shredding systems. To see the difference between our Hammermill shredding systems with a filtering screen and ordinary shredding systems, please see or ask for our **"Shredding Comparison."**
